PROTECT YOURSELF!
PERSONAL PROTECTIVE EQUIPMENT (PPE) IN THE CLINICAL LABS

EYES & FACE
A plexiglass shield can protect the eyes and face from possible splashes with blood and body fluids.

HANDS
Properly fitting, impermeable gloves can protect hands from possible contact with blood and body fluids.

CLOTHING
A well-fitting, buttoned labcoat can cover and protect street clothes from possible blood and body fluid contamination.

FEET
Closed-toe shoes can protect against physical injury as well as contamination from blood and body fluids.

“PPE is mandatory – use it!”
